Python 3.11.1 documentation

Welcome! This is the official documentation for Python 3.11.1.

Parts of the documentation:

What's new in Python 3.11?

or all "Whatsnew" documents since 2.0

Tutorial

start here

Library Reference

keep this under your pillow

Language Reference

describe syntax and language elements

Python Setup and Usage

how to use Python on different platforms

Python HOWTOs

in-depth documents on specific topics

Indices and tables:

Global Module Index

quick access to all modules

General Index

all functions, classes, terms

Glossary

the most important terms explained

Meta information:

Reporting bugs

History and License of Python

Installing Python Modules

installing from the Python Package Index & other sources

Distributing Python Modules

publishing modules for installation by others

Extending and Embedding

tutorial for C/C++ programmers

Python/C API

reference for C/C++ programmers

FAQs

frequently asked questions (with answers!)

Search page

search this documentation

Complete Table of Contents

lists all sections and subsections

Copyright
Contributing to Docs
About the documentation

Note

This document is being retained solely until the `setuptools` documentation at https://setuptools.readthedocs.io/en/latest/setuptools.html independently covers all of the relevant information currently included here.

The Python Package Index (PyPI)

The Python Package Index (PyPI) [https://pypi.org] stores metadata describing distributions packaged with distutils and other publishing tools, as well the distribution archives themselves.

References to up to date PyPI documentation can be found at Reading the Python Packaging User Guide.

Uploading Packages to the Package Index

References to up to date PyPI documentation can be found at Reading the Python Packaging User Guide.

Availability: not Emscripten, not WASI.

This module does not work or is not available on WebAssembly platforms `wasm32-emscripten` and `wasm32-wasi`. See WebAssembly platforms for more information.
